April + Q2 2026 Forecast and Goals Report

Neighborhood Golf Carts | Forward-Looking CFO Planning Report | Prepared April 7, 2026

This report uses February and March 2026 operating and accounting results as the baseline for April goals and a Q2 2026 growth forecast. The intent is controlled growth with margin repair, stronger route density, improved staff utilization, and targeted market-share expansion in the best-performing ZIP codes.

1. Baseline Operating Position

Neighborhood Golf Carts enters April with a stronger demand profile than at the start of Q1. February closed at 51 unique completed jobs, $29,377.09 of completed-job revenue, and $576.02 average revenue per job. March improved to 64 unique completed jobs, $40,572.85 of completed-job revenue, and $633.95 average revenue per job.

The business has therefore already proven three things: demand is present, average ticket is moving upward, and core ZIP-code concentration is becoming clearer. The financial challenge going forward is not simply to grow top-line sales, but to convert that growth into better margin retention, improved cash generation, and lower travel drag per field hour.

2. Key Baseline Metrics

Metric	February 2026	March 2026	Trend
Unique completed jobs	51	64	+25.5%
Completed-job revenue	$29,377.09	$40,572.85	+38.1%
Average revenue per job	$576.02	$633.95	+10.1%
Operational gross margin	45.94%	32.34%	Declined
Travel share of field hours	n/a	49.2%	Too high
Revenue per total field hour	n/a	$122.65/hr	Needs improvement
QBO net operating income	$9,141.44	$2,865.61	Margin compression

3. April 2026 Operating Goals

April should be managed under a controlled-growth model. The objective is to grow volume and market presence while repairing margin leakage from March. Recommended goals are shown in three layers below: minimum acceptable, target, and stretch.

Metric	Minimum	Target	Stretch
Unique completed jobs	66	70	74
Average revenue per job	$645	$665	$685
Completed-job revenue	$42,570	$46,550	$50,690
Travel share of field hours	<= 46%	<= 44%	<= 42%
Revenue per on-job hour	$245/hr	$252/hr	$260/hr
Revenue per total field hour	$135/hr	$140/hr	$145/hr
Operational gross margin	35%	36%-37%	38%
QBO net operating income	$4,000	$5,000-$6,000	$6,500-$8,000

4. April 2026 Forecast

The base-case April forecast assumes modest carryover growth from March, somewhat cleaner routing, better owner allocation, and removal of the training overlay that affected March. It does not assume an aggressive expansion in fixed overhead.

- Base-case forecast: 70 unique completed jobs, $665 average revenue per job, and $46,550 completed-job revenue.
- Expected operational gross margin: approximately 36.0%.
- Expected operational gross profit: approximately $16,758.
- Expected QBO income range: approximately $47,000 to $48,500.
- Expected net operating income range: approximately $5,000 to $6,000.

A conservative case would still target 66 jobs and approximately $42,570 completed-job revenue. A stretch case would target 74 jobs and approximately $50,690 completed-job revenue, but that level should only be pursued if route density and approval conversion remain disciplined.

5. Q2 2026 Forecast Path

Q2 should be run as a capacity-and-density quarter rather than a pure sales quarter. The business should expand from stronger ZIP clusters outward only after proving that April gains are profitable.

Month	Jobs	Avg Revenue / Job	Completed-Job Revenue
April 2026	70	$665	$46,550
May 2026	74	$675	$49,950
June 2026	78	$685	$53,430
Q2 Total	222	$675 blended	$149,930

The Q2 target case therefore calls for 222 completed jobs and approximately $149,930 of completed-job revenue. A well-executed stretch case could move into the $155,000 to $165,000 range, but only if revenue per field hour and route density both improve materially.

6. Primary April Priorities

- Reduce travel share of field hours. March showed nearly half of field labor consumed by travel. April must group jobs tighter by geography and avoid scattered low-yield dispatches.
- Protect average ticket and gross margin. Volume alone is not enough. Trip-fee discipline, approval conversion, and higher-value work mix must improve.
- Reset labor deployment after Daniel's release. April should operate with clearer primary field responsibility and less owner time tied up in training or supervision.
- Improve owner utilization. Ryan's best use is high-value diagnostics, escalations, customer approvals, route control, and business development rather than low-dollar windshield time.
- Tighten monthly operating-to-accounting reconciliation. Completed-job revenue, paid-in-full collections, QBO income, recognized COGS, and unusual expenses should be bridged each month.
- Convert top ZIP demand into repeat density through follow-up calls, reviews, referrals, and repeat-service scheduling.

7. Q2 Strategic Priorities

- Build the core service territory first. Grow depth before breadth, especially in the strongest ZIP clusters.
- Shift the job mix toward premium work such as diagnostics, electrical troubleshooting, battery problems, lithium upgrades, and higher-dollar repair tickets.
- Raise revenue per total field hour. Suggested path: $135-$145 in April, $140-$150 in May, and $145-$155 in June.
- Improve balance-sheet durability by continuing to reduce Stripe balance, protecting cash, and avoiding unnecessary inventory build.
- Establish service-area profitability rules. Not every job is a good job. Lower-yield areas should be managed with minimum-ticket expectations and firmer trip-fee structure.
- Measure market-share expansion by repeat-customer flow, review count, referral volume, and concentration of work in the top-performing ZIPs rather than by raw job count alone.

8. Market-Share Expansion Focus

March results indicate that NGC should not attempt to grow evenly in every direction. The highest-return growth path is to increase presence in the ZIPs already showing revenue strength and decent ticket quality.

Priority Group	ZIP Codes	Forward-Looking Use
Primary density markets	70433, 70471	Focus routing, reviews, repeat customers, and premium service marketing here first.
Secondary volume support	70447, 70435	Use for schedule fill where route density can be stacked profitably.
Premium-ticket opportunity	70058	Pursue selective high-value diagnostics and premium work without overbuilding travel load.
Caution / lower-yield area	70070	Protect with trip-fee discipline and minimum-value dispatch rules.

9. Weekly Dashboard for April and Q2

The following KPI lines should be reviewed weekly to keep growth disciplined and measurable:

- Unique jobs completed
- Completed-job revenue
- Average revenue per job
- Revenue per on-job hour
- Revenue per total field hour
- Travel share of field hours
- Operational gross margin percentage

- Top 5 ZIP concentration
- Trip-fee capture rate
- Estimate approval rate
- Cash collected
- Bank balance and Stripe balance
- Booked backlog by week

10. CFO Conclusion

The correct plan for April and Q2 is controlled growth with margin recovery. March proved that the company can produce work and that market demand exists. Q2 now needs to prove that NGC can scale that work profitably through tighter routing, stronger job selection, better labor allocation, and more deliberate concentration in the best ZIP codes.

If April meets the target range of 70 jobs and approximately $46,550 completed-job revenue while improving travel percentage and net operating income, then Q2 expansion should continue along the planned May and June path. If April misses the margin and utilization targets, management should slow expansion pressure and fix routing, pricing, and labor discipline before pushing additional market-share growth.

11. End Notes

This forecast and goals report was prepared using February and March 2026 operating and accounting results previously reviewed from Housecall Pro and QuickBooks Online. Forecast values are management-planning targets, not guarantees, and actual results will vary based on route density, technician productivity, estimate approval rates, collections timing, and overhead behavior.

All recommendations are forward-looking planning guidance based on the data available at the time of this report.
