

March 2026 CFO Month-End Summary

Neighborhood Golf Carts | Letter-size print version | Revision 2 | Prepared April 7, 2026

Revision 2 updates the original report to reflect direct March 2026 versus February 2026 comparison using the prior-period columns shown in the QuickBooks Profit and Loss and Balance Sheet PDFs, and restores the original jobs, staff, and operating-detail review. It also corrects staff-utilization commentary using management-provided context that Daniel Champagne was hired in March, was in online training and OJT during most of the month, and was paired with senior staff before being released at month-end for not conforming to company standards.

Metric	March 2026	February 2026	Key Read
Completed jobs (unique)	64	51	Volume up 25.5%
Completed-job revenue	\$40,572.85	\$29,377.09	Revenue up 38.1%
Average revenue per completed job	\$633.95	\$576.02	Ticket up 10.1%
QBO total income	\$42,974.16	\$30,057.42	Accounting revenue up 43.0%
QBO net operating income	\$2,865.61	\$9,141.44	Profit down 68.7%
Working capital	-\$10,507.87	-\$9,373.49	Liquidity worsened

1. Executive Summary

March 2026 was a strong production month for Neighborhood Golf Carts on unique completed-job volume, field revenue, and cash collections. The company completed 64 unique jobs and generated \$40,572.85 of completed-job revenue. Average revenue per completed job improved to \$633.95, up from \$576.02 in February.

The revised accounting review confirms that the QuickBooks Profit and Loss and Balance Sheet both included direct February 2026 prior-period comparison columns. Using those actual prior-period values, March revenue growth was real, but profit conversion weakened materially. Net operating income fell to \$2,865.61 from \$9,141.44 in February, while negative working capital widened to -\$10,507.87.

Management also confirmed that Daniel Champagne was hired during March and spent most of the month in online training and on-the-job training while paired with Ryan White or Payton Elkins. He was released at month-end for failure to conform to company standards. That context explains the employee-level double counting in the staff reports as paired labor deployment rather than duplicate company production.

2. KPI Snapshot: March 2026 vs February 2026

The table below uses unique company totals from the Housecall Pro operating reports and direct prior-period values taken from the March QuickBooks PDF reports.

Metric	March 2026	February 2026	Key Read
Completed jobs (unique)	64	51	+13 +25.5%
Completed-job revenue	\$40,572.85	\$29,377.09	+\$11,195.76 +38.1%
Average revenue per completed job	\$633.95	\$576.02	+\$57.93 +10.1%
Paid-in-full cash receipts	\$44,717.06	n/a	Collections exceeded completed revenue
Operational gross profit	\$13,120.60	\$13,494.94	-\$374.34
Operational gross margin	32.34%	45.94%	-13.60 pts
QBO total income	\$42,974.16	\$30,057.42	+\$12,916.74 +43.0%
QBO gross profit	\$26,624.76	\$25,321.64	+\$1,303.12 +5.1%
QBO total expenses	\$23,759.15	\$16,180.20	+\$7,578.95 +46.8%
QBO net operating income	\$2,865.61	\$9,141.44	-\$6,275.83 -68.7%
Current assets	\$17,064.45	\$17,670.39	-\$605.94
Current liabilities	\$27,572.32	\$27,043.88	+\$528.44
Working capital	-\$10,507.87	-\$9,373.49	-\$1,134.38

3. Revenue, Job Count, and Average Revenue per Job

Neighborhood Golf Carts

March 2026 CFO Month-End Summary - Revision 2

Using the Housecall Pro completed-day production report, March closed with 64 unique completed jobs and \$40,572.85 of completed-job revenue. Average revenue per completed job was \$633.95, which was a favorable increase over February's \$576.02. This confirms that both volume and average ticket improved month over month.

On a collections basis, the paid-in-full report shows \$44,717.06 collected during March. Collections therefore exceeded March completed-job revenue by \$4,144.21, indicating healthy cash intake and some collection timing benefit from work completed in both the current and prior periods.

The QuickBooks Profit and Loss report confirms total March income of \$42,974.16 versus \$30,057.42 in February. Top-line growth was therefore real and significant on both the operating and accounting views.

4. Jobs and Daily Production Review

The completed-day operating report shows total March completed-job revenue of \$40,572.85, total cost of \$27,452.00, gross profit of \$13,120.60, and gross margin of 32.34%. Average gross profit per unique completed job was approximately \$205.01.

March produced revenue on 22 of 31 calendar days. Average revenue per revenue-producing day was \$1,844.22, and average revenue per calendar day was \$1,308.80. On the collections side, cash posted on 25 of 31 days, with average collections of \$1,788.68 per collection day.

Top March production days by completed-job revenue are shown below.

Completed Day	Revenue	Gross Profit	Margin
Mar 06, 2026	\$6,212.87	\$2,925.84	47.09%
Mar 13, 2026	\$4,223.25	-\$2,724.98	-64.52%
Mar 28, 2026	\$3,033.00	\$1,268.46	41.82%
Mar 07, 2026	\$2,935.71	\$1,568.14	53.42%
Mar 17, 2026	\$2,921.30	\$1,072.21	36.70%

The top five paid-in-full collection days are shown below for cash-flow context.

Paid-in-Full Day	Collections
Mar 15, 2026	\$5,420.30
Mar 07, 2026	\$5,033.27
Mar 30, 2026	\$4,628.31
Mar 21, 2026	\$4,028.84
Mar 28, 2026	\$3,703.00

5. Profitability Review from QuickBooks

Revision 2 uses the actual prior-period column shown in the March Profit and Loss PDF. Cost of goods sold increased from \$4,735.78 in February to \$16,349.40 in March, a rise of \$11,613.62. Gross profit increased only modestly, from \$25,321.64 to \$26,624.76, which means most of the incremental revenue was absorbed by direct costs.

Operating expenses also moved materially higher, rising from \$16,180.20 in February to \$23,759.15 in March. The largest visible March expense buckets were payroll expenses at \$9,120.69, rent at \$4,700.00, professional fees at \$2,525.00, automobile expense at \$1,482.03, merchant account fees at \$991.50, advertising and marketing at \$762.00, and software expense at \$497.27.

As a result, monthly net operating income declined from \$9,141.44 in February to \$2,865.61 in March. The business remained profitable, but only at roughly 6.7% net margin on March QBO income. The central March issue was not demand; it was conversion of revenue into retained profit.

6. Expense and Margin Bridge

The simplified bridge below highlights why stronger revenue did not translate into stronger earnings.

Category	March	February	Delta	Comment
Income	\$42,974.16	\$30,057.42	\$12,916.74	Strong top-line growth
COGS	\$16,349.40	\$4,735.78	\$11,613.62	Large direct-cost increase
Gross profit	\$26,624.76	\$25,321.64	\$1,303.12	Revenue gain largely consumed
Operating expenses	\$23,759.15	\$16,180.20	\$7,578.95	Heavier fixed and payroll burden
Net operating income	\$2,865.61	\$9,141.44	-\$6,275.83	Margin compression

7. Balance Sheet and Liquidity Review

Neighborhood Golf Carts

March 2026 CFO Month-End Summary - Revision 2

Revision 2 also uses the actual prior-period column shown in the March Balance Sheet PDF. Total current assets declined slightly from \$17,670.39 in February to \$17,064.45 in March. Bank accounts improved from \$6,009.53 to \$9,300.96, but other current assets fell from \$11,660.86 to \$7,763.49, driven mainly by inventory asset decreasing from \$9,213.96 to \$4,763.11.

Current liabilities increased from \$27,043.88 to \$27,572.32. The Stripe Capital balance improved modestly from \$24,273.83 to \$23,084.29, but current liabilities still materially exceed current assets. Working capital worsened from -\$9,373.49 in February to -\$10,507.87 in March, and the current ratio weakened from approximately 0.65 to 0.62.

Liquidity therefore remains tight. Cash improved, but the company is still operating with negative working capital and limited near-term balance-sheet cushion.

8. Best Performing ZIP Codes

The strongest ZIP codes should be evaluated on both total revenue and average job value. March core demand remained concentrated in a small set of ZIP codes, which is favorable for route density and future marketing efficiency.

ZIP Code	Revenue	Job Count	Average Job
70433	\$9,283.38	12	\$773.62
70471	\$6,920.52	7	\$988.65
70447	\$4,265.30	9	\$473.92
70058	\$3,214.92	2	\$1,607.46
70435	\$2,466.74	3	\$822.25
70454	\$2,324.59	4	\$581.15
70448	\$2,319.87	3	\$773.29
70079	\$1,894.42	1	\$1,894.42

70433 remained the best overall market for the month, producing the highest revenue and highest job count. 70471 was the strongest balanced premium market, combining meaningful volume with a strong average job value. 70058 produced the highest premium average ticket among the leading ZIP codes, although at low volume.

70070 produced six jobs but only \$221.14 average revenue per job, which suggests a lower-yield dispatch area unless protected by trip-fee discipline and strong repair conversion.

9. Staff Utilization, Jobs, and Training Context

The March labor reports show 167.9 on-job hours and 162.9 travel hours, for a total of 330.8 field hours. Onsite time therefore represented 50.8% of total field time and travel represented 49.2%. On a company-wide unique-job basis, March generated approximately \$241.65 of revenue per on-job hour and \$122.65 of revenue per total field hour.

The employee-level attribution view is shown below for operational context only. It must not be added together as if it represented independent company production streams.

Employee	Revenue	Job Count	Avg Job	On-Job Hrs	Travel Hrs	Travel Share	Revenue / Total Hr
Total	\$40,572.85	64	\$633.95	167.9	162.9	49.2%	\$122.65
Payton Elkins	\$31,498.96	35	\$899.97	93.3	24.1	20.5%	\$268.30
Ryan White	\$14,501.27	34	\$426.51	30.0	127.3	80.9%	\$92.19
Daniel Champagne	\$10,087.73	22	\$458.53	44.6	11.4	20.4%	\$180.14

The profitability and hours-per-tech view is shown below.

Employee	On-Job Hrs	Travel Hrs	Hrs / Tech / Job	Avg Gross Profit	Profit Margin
Total	167.9	162.9	1.9	\$205.01	32.34%
Payton Elkins	93.3	24.1	2.7	\$428.40	47.60%
Daniel Champagne	44.6	11.4	2.1	\$236.02	51.47%
Ryan White	30.0	127.3	0.9	-\$10.98	-2.58%

Management confirmed that Daniel Champagne was hired in March, was receiving online training and on-the-job training during most of the month, and was paired with Ryan White or Payton Elkins during that period. He was released at the end of March for failure to conform to company standards. That context changes the labor interpretation materially.

The double counting does not indicate duplicate company revenue; it reflects paired labor deployment during training. The correct company production totals remain the unique totals shown in the report header: 64 jobs, \$40,572.85 of revenue, 167.9 on-job hours, and 162.9 travel hours.

Neighborhood Golf Carts

March 2026 CFO Month-End Summary - Revision 2

Ryan White's high travel hours should therefore be read as a combination of owner dispatch burden, mobile routing burden, supervision, and training overhead during March rather than as a pure low-productivity indicator. March should be viewed as a month carrying meaningful training overhead while the business was still producing at a high level.

10. Overall CFO Assessment

- March 2026 was a growth month with strong field demand, improved average ticket, and improved operating-account cash position.
- Using the actual February prior-period columns on the P&L and Balance Sheet, profit conversion weakened materially and liquidity remained tight.
- The company absorbed real training and supervisory overhead during March while still completing 64 unique jobs.
- The principal weaknesses were direct-cost control, travel burden, and a current-liability structure that still exceeded near-term asset coverage.

For April and forward, the highest-value financial focus areas are preserving average revenue per job, protecting gross margin on lower-value dispatches, continuing geographic density in the top ZIP codes, and reducing non-billable travel and supervisory drag now that the March training cycle has ended.

11. End Notes

This report was prepared from the Housecall Pro operating reports and QuickBooks Online March 2026 month-end Profit and Loss and Balance Sheet reports supplied for review, including the February 2026 prior-period comparison columns shown within the PDF reports.

Employee utilization commentary in Revision 2 incorporates management-provided context that Daniel Champagne was in online training and on-the-job training during most of March, was paired with senior staff during that period, and was released at month-end for failure to conform to company standards.

The data was reviewed and commented on as provided in Housecall Pro and QuickBooks Online at the time of the report. Any later source corrections, reclassifications, timing adjustments, or close-out entries would change the conclusions accordingly.
