

Shop Poster — Key Safety Reminders

Post at bay entrance. Review Week 1; reinforce every session.

1. Always wear appropriate PPE — no exceptions.
2. Treat every battery pack as energized until verified zero with your meter.
3. Never work alone on high-voltage or high-current systems during training.
4. Remove all jewelry before working on electrical systems.
5. Use one hand when possible when probing live circuits.
6. Ventilate battery charging areas — hydrogen gas is explosive.
7. Never bypass safety interlocks or HPD circuits for delivery.
8. Document everything. If it isn't written down, it didn't happen.
9. When in doubt — stop and ask. There are no stupid questions in safety.
10. Gasoline work: extinguisher ready, ventilation on, spill control first.
