

Lab W03 — Lead-Acid vs Lithium Comparison Sheet

Student: __ Date: _____

Topic	Flooded Lead-Acid	Lithium (e.g., LiFePO4)	Your lab observation
Watering	Required	Not required	
Equalization	Used when indicated	Not with LA charger / not typical EQ	
Weight (relative)	Heavier	Lighter	
Charger type	LA profile	Lithium-specific	
Key protective device	Fuses/breakers primarily	BMS (+ fusing)	
Typical maintenance focus	Water, clean, torque, load test	Connections, charger, BMS/ SOC health	
Freeze / cold charge concerns	Capacity loss; freeze if discharged	Charge inhibit possible below freezing	
Example pack voltage measured			
Cell/module data available?	SG/OCV per battery	App/tool cell voltages	

Short answers

1. Why must chemistry-matched chargers be used?
2. List two BMS data points you observed (or from demo sheet):
